Ipswitch WhatsUp Gold Distributed Edition

Comprehensive Enterprise Network Management

WhatsUp Gold Distributed Edition Features

Remote Network Management

Unlimited number of remote networks; secure connectivity via SSL to NOC, separate dashboards for each remote site

Intuitive Management Interface

Windows and Web-based local and remote consoles, workspaces, and dashboards, and NOC-based management

Mobile Access

Full access to network status, device views, reports, alerts and notifications via mobile phones and PDAs

Full SNMP v1-3 Functionality

AutoMIB (drag and drop MIB access), MIB Walker, MIB Explorer, MIB Manager, and full SNMP v3 security

Powerful WMI Monitoring Functionality

Any WMI system, OS, application, and predefined templates

Dynamic Device Discovery

SNMP, IP address range, SNMP SmartScan, file import, and hosts file

Visual Network Mapping

Network topology, networks, subnets, devices, applications, and systems

Configurable Monitoring

Performance, passive, active, real-time, custom (scripted), monitoring templates, and bulk changes

Predictive Alerts

Customizable, up, down, and threshold (min/max), maintenance mode, device dependency, and escalation

Instantaneous Notifications

SMS, email, alpha and numeric pagers, management console, Windows popups or task tray and scripted

Real-time Reporting

150+ configurable reports, real-time Split Second, and historical graphs

Comprehensive Security

Local certificates, trusted certificates, and 128-bit SSL

Role-based Management

Tailored access to network maps, configuration, alerts, notifications, reporting, and management console

Common Product Architecture

Product family is built on single core framework that provides transparent upgrade path, consistent usability at the lowest possible TCO, as well as easily integrated plug-in modules which expand upon WhatsUp Gold's functionality.

Network Management for Complex Multisite Networks

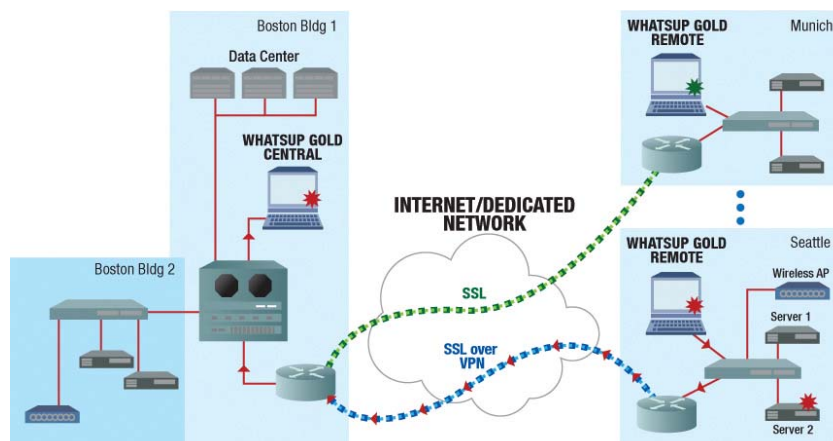

WhatsUp® Gold Distributed Edition provides scalable and secure management and monitoring of any number of remote sites — out-of-the-box — from a centralized NOC. With powerful device discovery, graphical network mapping, SNMP v1-3 and WMI monitoring, and versatile alerting, notification, and reporting capabilities, WhatsUp Gold Distributed Edition provides 360° visibility, actionable intelligence, and complete control. WhatsUp Gold now offers you mobile access to the status of your network, as well as enhanced SNMP security with SNMP v3 discovery and traps.

Built on the award-winning WhatsUp Gold core architecture, WhatsUp Gold Distributed Edition allows you to manage complex, geographically-dispersed network environments reliably and effectively, at the lowest possible TCO.

WhatsUp Gold Distributed Edition:

- Discovers and maps all your network devices and systems automatically
- Notifies you proactively as problems occur on your network
- Presents both instantaneous and historical reporting
- Provides reliable anytime, anywhere distributed network management

For distributed enterprises, network downtime has a wide range of negative consequences — from lost productivity and tarnished reputation to lower revenue and a loss of shareholder value. Historically, organizations with multiple sites and interconnected networks have had to choose between installing disconnected solutions at each location or incurring considerable expense purchasing and supporting complex enterprise solutions.

Powerful remote-site management that minimizes bandwidth by only forwarding alerts to NOC.

www.whatsupgold.com

No matter how many locations you have, WhatsUp Gold Distributed Edition gives you accurate information on all your network installations, all the time. It delivers comprehensive, easy to use application and network management that reveals your entire network in minutes with powerful discovery and mapping capabilities.

Proactive and predictive SNMP and WMI monitoring, along with powerful alerting and notification features, let you quickly identify and resolve network problems. Intuitive Windows and Web-based interfaces use dashboards to deliver real-time access to more than 150 reports, giving you vital information to keep your network strong and healthy.

WhatsUp Gold Distributed Edition builds on the powerful WhatsUp Gold architecture to deliver a highly scalable, low bandwidth solution for distributed environments that:

- Provides real-time, centralized network management across multiple locations with location-specific dashboards. Continuous monitoring allows you to run each site independently if connectivity is ever lost.
- Decreases processing loads at central location by dispersing monitoring components to each remote site
- Minimizes traffic on WAN links between each remote site and the central monitoring site with localized monitoring
- Reduces false alarms from WAN link or provider equipment failures with alert dependencies
- Delivers unlimited scalability with any number of remote sites supported from a single central NOC
- Provides airtight security between each remote network connection and the central site with 128-bit SSL encryption and SSL over VPN
- Generates actionable intelligence with consolidated information from each remote site. More than 150 reports can be created, including SLA compliance reports.

Powerful multisite network management that's cost-effective and easy to implement.

Highly visual and instantaneous status of the complete infrastructure.
