

# IMail Server Version 10

## Proven Messaging Technology for Small to Medium-Sized Businesses

Datasheet

Ipswitch IMail Server delivers the email that your business teams need without the cost, complexity, and long-term maintenance of other difficult-to-support solutions. Reliable, versatile, easy to set up and run, IMail provides email and protection from spam and viruses. Ipswitch has been delivering practical information technology for more than fifteen years and has designed IMail with the unique needs of small to mid-sized businesses in mind. IMail is available in versions well suited to the small to mid-sized business market, including IMail Server Premium, which leverages premium anti-spam protection, instant messaging, and collaboration.

IMail Server Version 10's web messaging allows users to send and receive rich-text messages and features and intuitive user interface.

### IMail Server Version 10: A Proven Messaging Solution

Email is the foundation for corporate communication. IMail Server is a proven email solution that 60 million users worldwide rely on every day. With IMail, users can send and receive email using any standards-based client, including Microsoft® Outlook®, Outlook Express®, or Eudora®. Or, users can access email from anywhere via IMail's customizable Web messaging, available in eight languages. With IMail Server, administrators can set up virtual hosts to serve email for several domains from a single server. IMail also enables you to easily set up automated mailing lists and no-maintenance discussion groups. These list-servers offer a time-tested technique for facilitating discussion and information sharing by receiving and then automatically re-sending mail to all the users on the mailing list.

### Exceptionally Easy to Set Up and Run

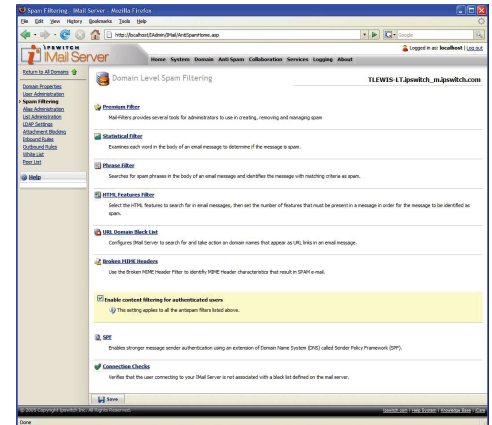

Ipswitch IMail Server installs quickly, and unlike more complicated, large-footprint messaging solutions, IMail is designed to place minimal ongoing maintenance burden on network administrators. IMail can authenticate users from its own database, an active directory database, or from any ODBC-compliant data store, making life easier for the busy administrator. IMail can be administered from any location with a Web browser, and can be run on a single, modestly-powered server.

### Realize Rapid Return on Investment

For small to mid-sized businesses, success depends on getting more done with less. For many, this means individuals must work together more efficiently and work on many projects at once. At the same time, these organizations must constantly strive to keep costs down by implementing practical software solutions that allow the organization to remain competitive. Ipswitch IMail Server meets the needs of small to mid-sized businesses by providing secure, powerful and straightforward messaging capabilities in a comprehensive solution that is easy to install, easy to maintain and easy to use.

### Protection Against Time-Wasting Spam

Unsolicited commercial email, or spam, is a productivity-sapping, resource-draining threat to business operations. Ipswitch IMail Server provides basic anti-spam defense using Bayesian filters, Real-time Blackhole Lists, Black Lists, White Lists and more; all of which require manual updates to remain current. By contrast, IMail Server Plus and IMail Server Premium feature automatically-updated Premium Anti-Spam Filtering that uses human and machine intelligence to identify and block spam in 30 different languages while virtually eliminating false positives. According to a recent survey, 96.4% of all email traffic is spam. This is further proof that the best way to eliminate spam is to stop it before it reaches the end user. IMail Server Plus and Premium editions are equipped to provide you with the highest level of anti-spam protection.

Ipswitch IMail Server Premium features premium anti-spam technology.

### Protection Against Dangerous Viruses

Ipswitch IMail Server offers an easy add-on protection to your business and your users from malicious code, Trojan horses, worms and other email borne threats by offering an integrated Anti-Virus technology from Symantec and Bit Defender as an add-on to any of our product offerings. IMail Server allows you to leverage the power of Symantec™ Scan Engine to safeguard your email with LiveUpdate™ technology that automatically loads new virus definitions.

### Ipswitch Messaging Solutions are Available in Configurations to Fit Your Needs

Standard messaging is available as Ipswitch IMail Server, as well as IMail Server Plus, which then allows you to add vital anti-spam protection powered by leading security vendors. Also available is Ipswitch IMail Server Premium, which adds secure instant messaging and shared calendars and contacts to the capabilities of IMail Server. All Ipswitch messaging products for small to mid-sized businesses are available in packages for 25, 100, 250, 1000 and unlimited users. The chart below summarizes the functions of each member of the Ipswitch messaging family.
