

Affordable, Reliable, Scalable and Secure

The Challenge

Organizations of all sizes are finding that the need to securely archive and rapidly produce email is not just a requirement for the Financial Services Industry any more. New State and Federal Rules mandating proper email archiving practices are forcing companies of all verticals to evaluate and implement email archiving technology. The Challenge: Many of these institutions are operating with limited financial and human resources required to manage such a project. For these institutions, Sonian Networks has the solution in our Hosted Archiving Service.

No Training Required

Sonian user interfaces are intuitive for all skill set levels. Extensive self-service online training videos guide users through all tasks. Administrators use self-service web UI's to configure the system without the need for systems engineers.

All Data Searchable at All Times

Other hosted archive vendors, in order to keep their costs low, migrate your older data to offline or near-line storage systems. This dramatically increases the amount of time required to search. Sonian keeps all data online and immediately accessible for searches.

Support for Both Compliance and Storage Resource Management Operations

The Sonian Archive system is designed to accommodate both compliance archiving (FRCP, SEC & HIPAA) as well as storage resource management. Archive everything for all users, or allow users to archive just the data they want to keep.

Support All Major Messaging Environments

Sonian supports all major messaging infrastructures including, but not limited to:

- > IBM Lotus Notes
- > Novell GroupWise 6.5.1 and 7.x
- > Microsoft Exchange 2000, 2003 and 2007
- > IMail Server
- > Mailtrust
- > Scalix
